

# Benchmarking a Many-Core System

UCI I-SURF 2017

Aug 25<sup>th</sup>, 2017 – Final Presentation

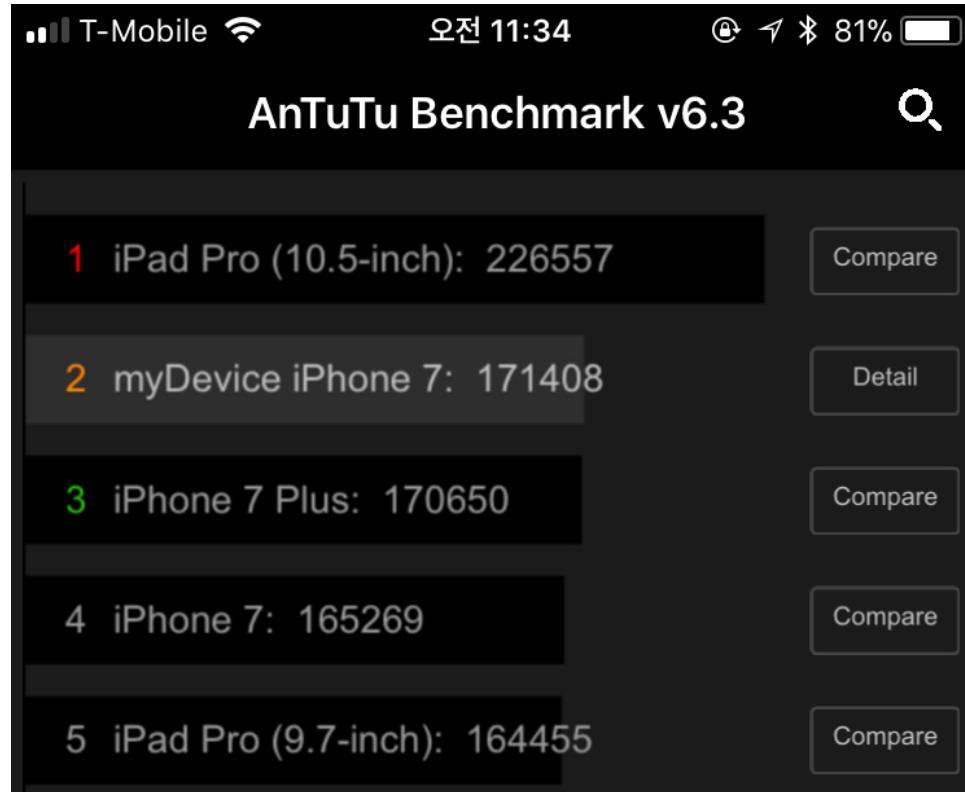

**Professor:** Nikil D. Dutt

**Graduate Mentor:** Bryan Donyanavard (Donny)

Kyuhan Lee, Sehee Jeong, Kihoon Han

# About Term “Benchmark”

It calculates the performance and displays the result as a score.

# Original Goal

Measuring the performance and power consumption  
related to each operation speed.

# Additional Goal (If Applicable)

Calculate the power to performance ratio.

&

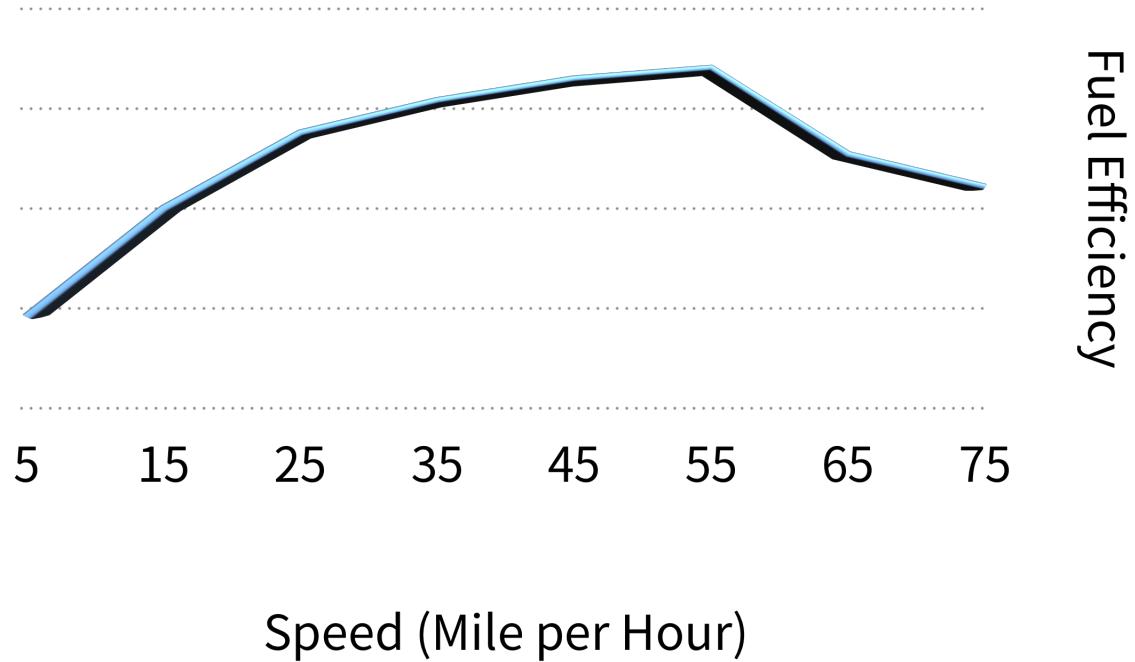

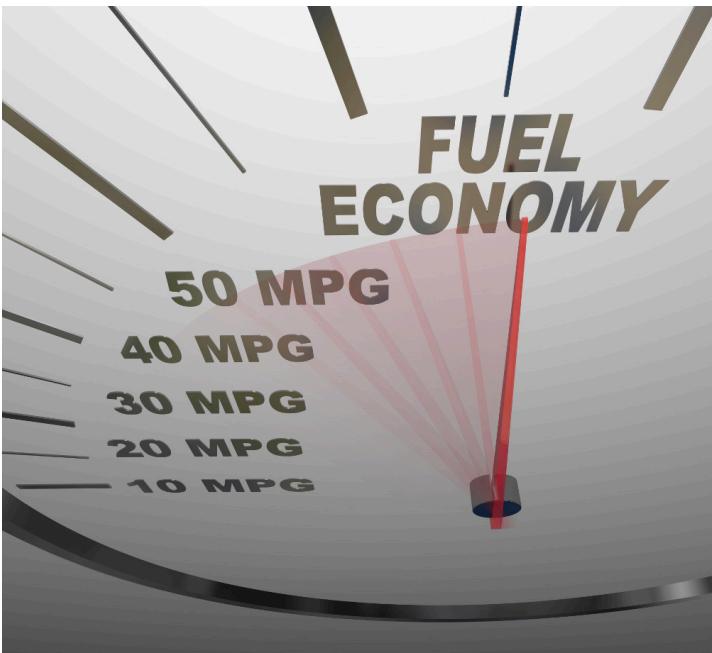

Find the most optimal one.

# Why We Want To Find It?

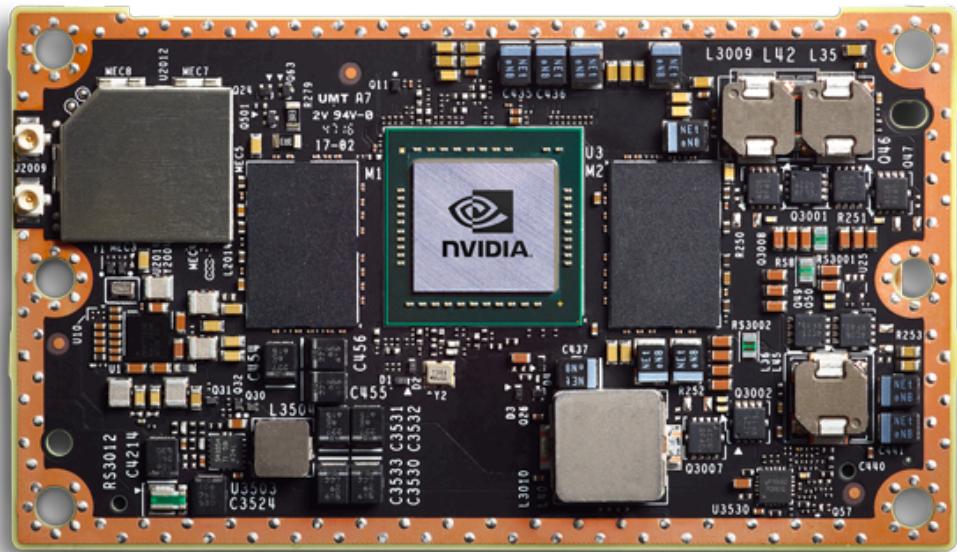

These days, there are a lot of systems  
that have limited power such as battery.

# Example of Driving

# Benchmark Environment (TX2)

- Ubuntu 16.04 LTS
- CPU with 6 cores
- GPU with 256 CUDA cores
- 12 Power Monitoring Units

# How To Adjust Performance? (TX2)

```
$ cat [cpu frequency] > /sys/devices/system/cpu/cpuN/cpufreq/scaling_max_freq  
(0 ≤ N ≤ 5)
```

```
$ cat [gpu frequency] > /sys/devices/17000000(gp10b)/devfreq/17000000(gp10b)/max_freq
```

We can use DVFS (Dynamic Voltage and Frequency Scaling).

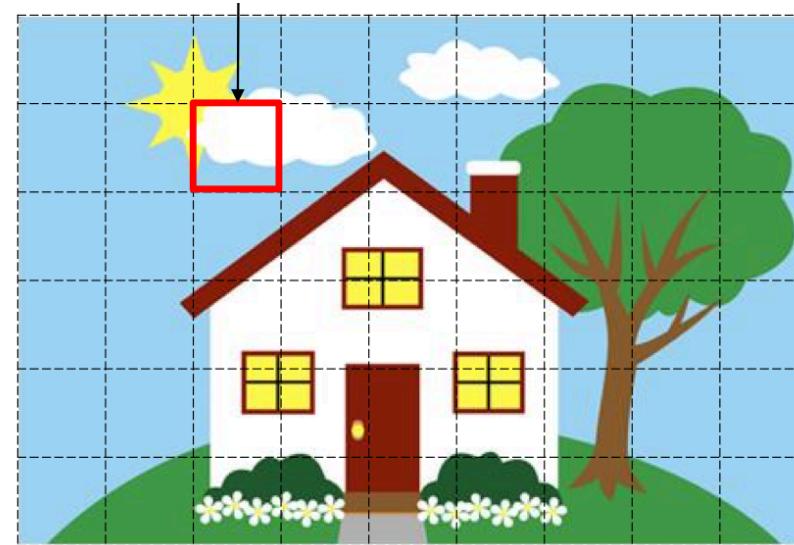

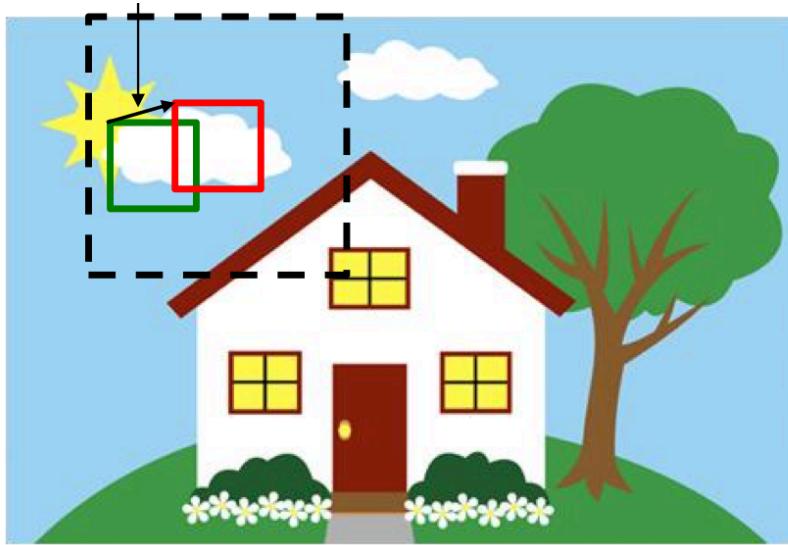

In TX2, we can adjust performance using above command.

# How To Measure Power Consumption? (TX2)

```
$ cat /sys/devices/3160000.i2c/i2c-0/0-004N/io_device/in_powerM_input  
(0 ≤ N ≤ 3, 0 ≤ M ≤ 2)
```

We can measure power consumption via I2C using above command.

# How To Benchmark? (TX2)

I used Stereo Block Matching algorithm.

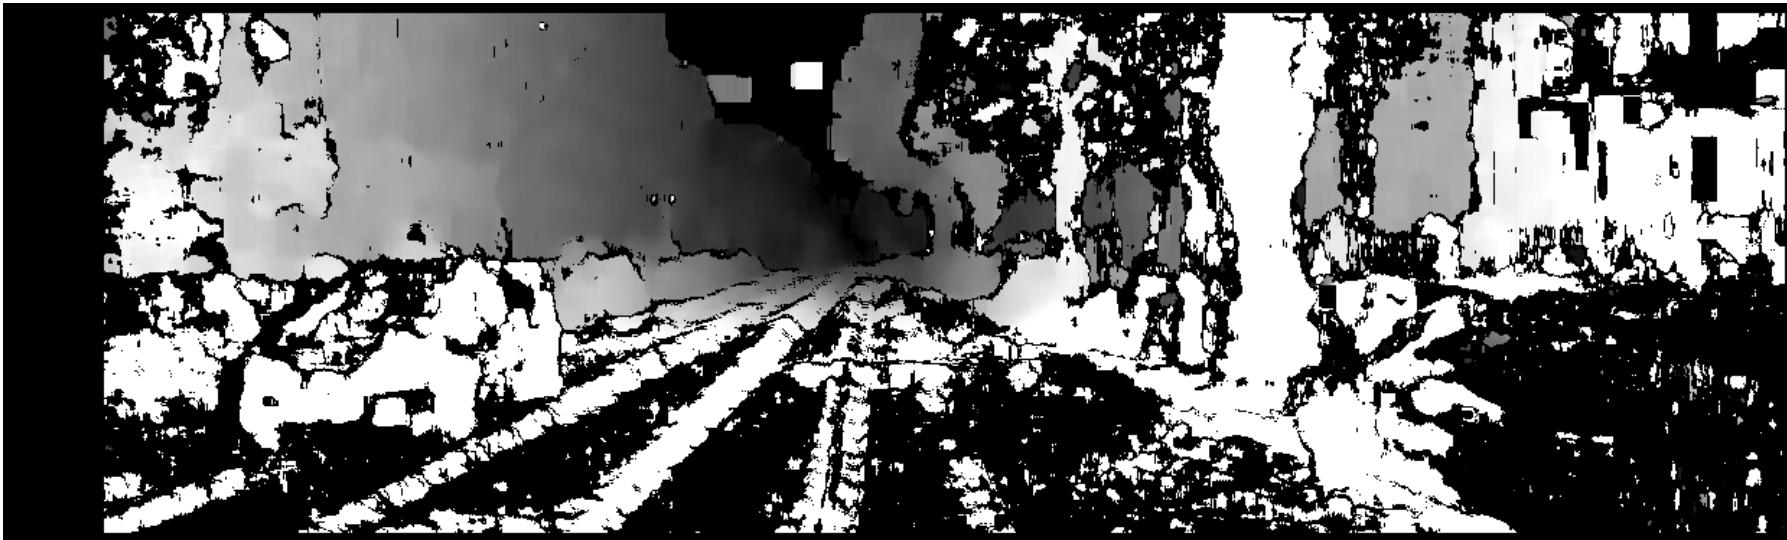

This algorithm can run on both CPU and GPU, and generates equal results.

# Benchmark Prodecure (TX2)

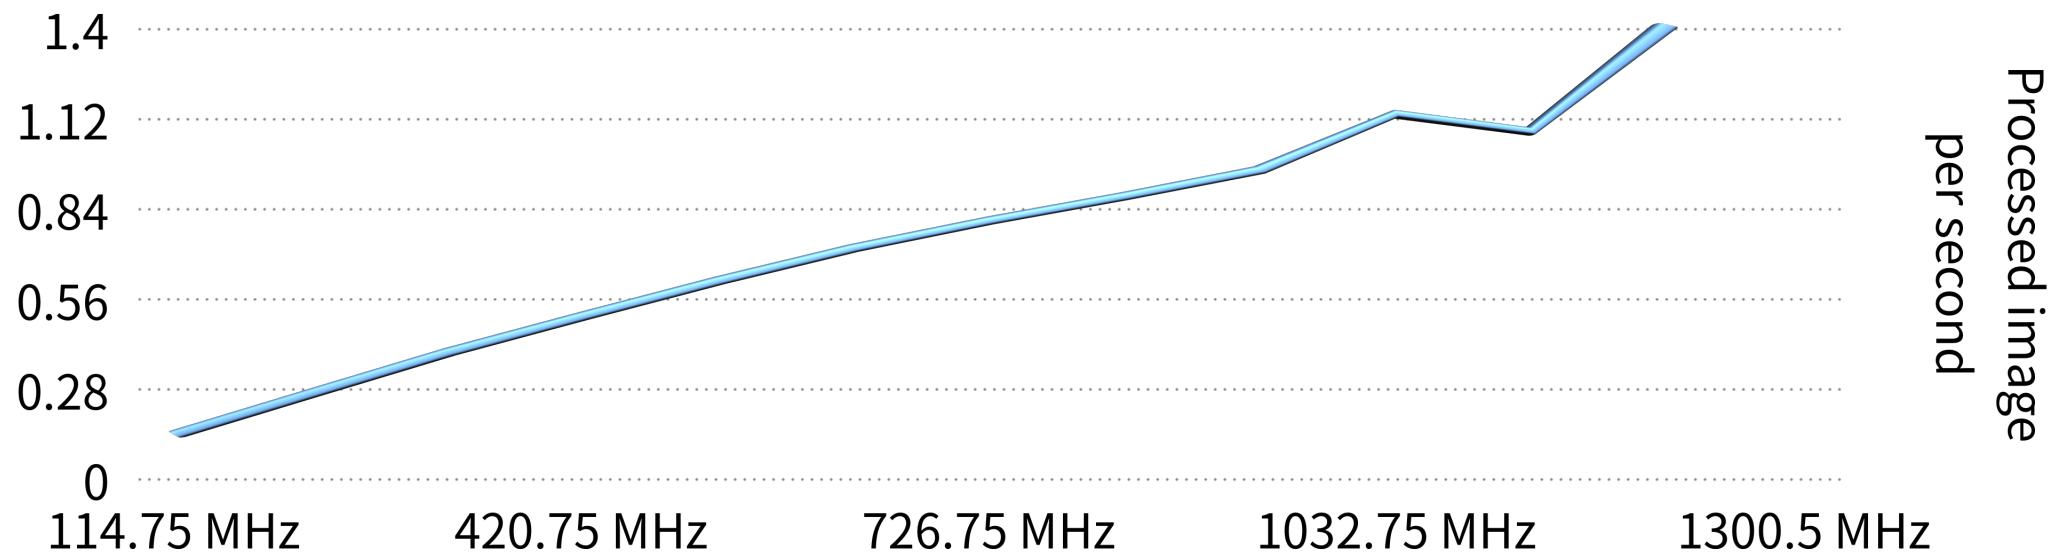

Using two 6000\*4000px resolution images.

# Benchmark Procedure (TX2)

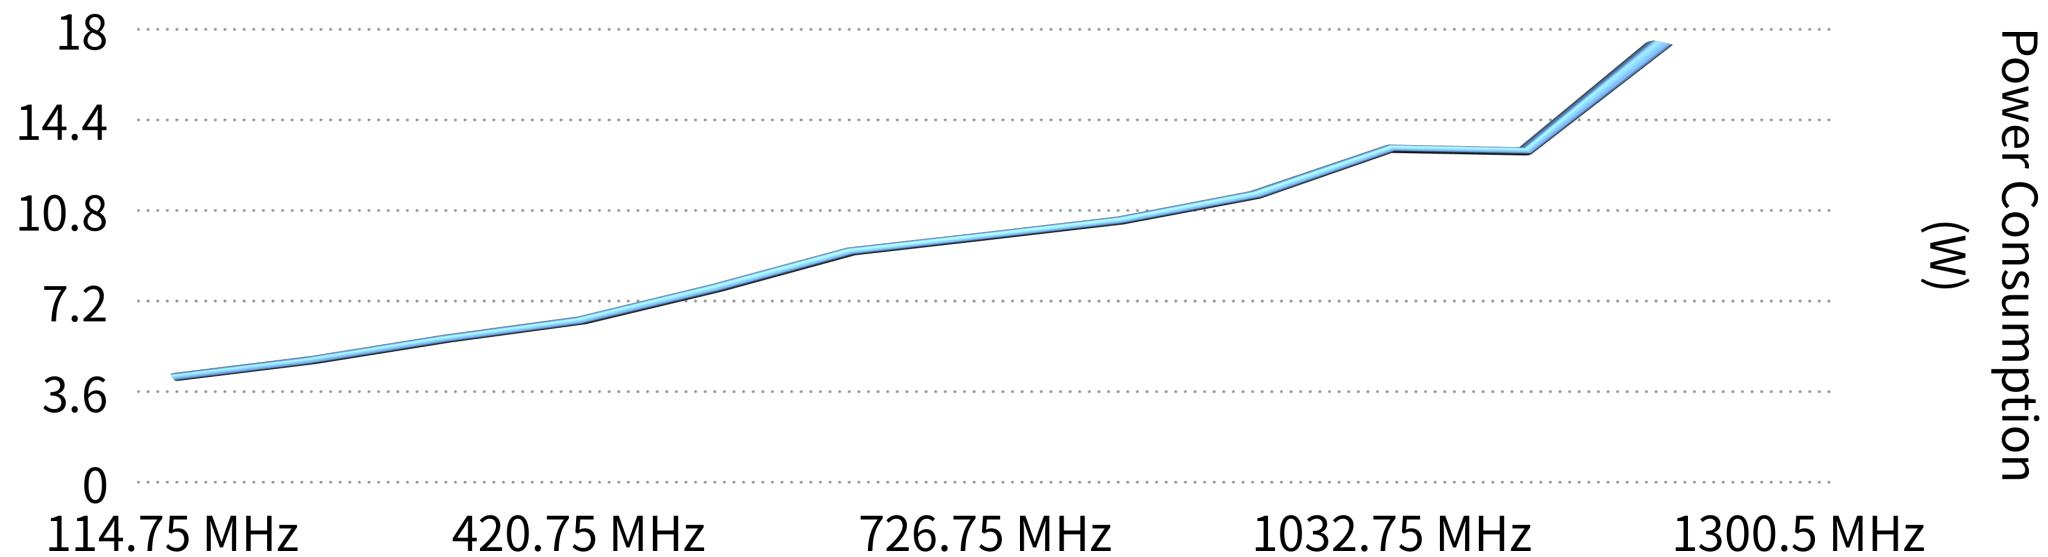

Generates result image using StereoBM algorithm.

# Benchmark Results (TX2)

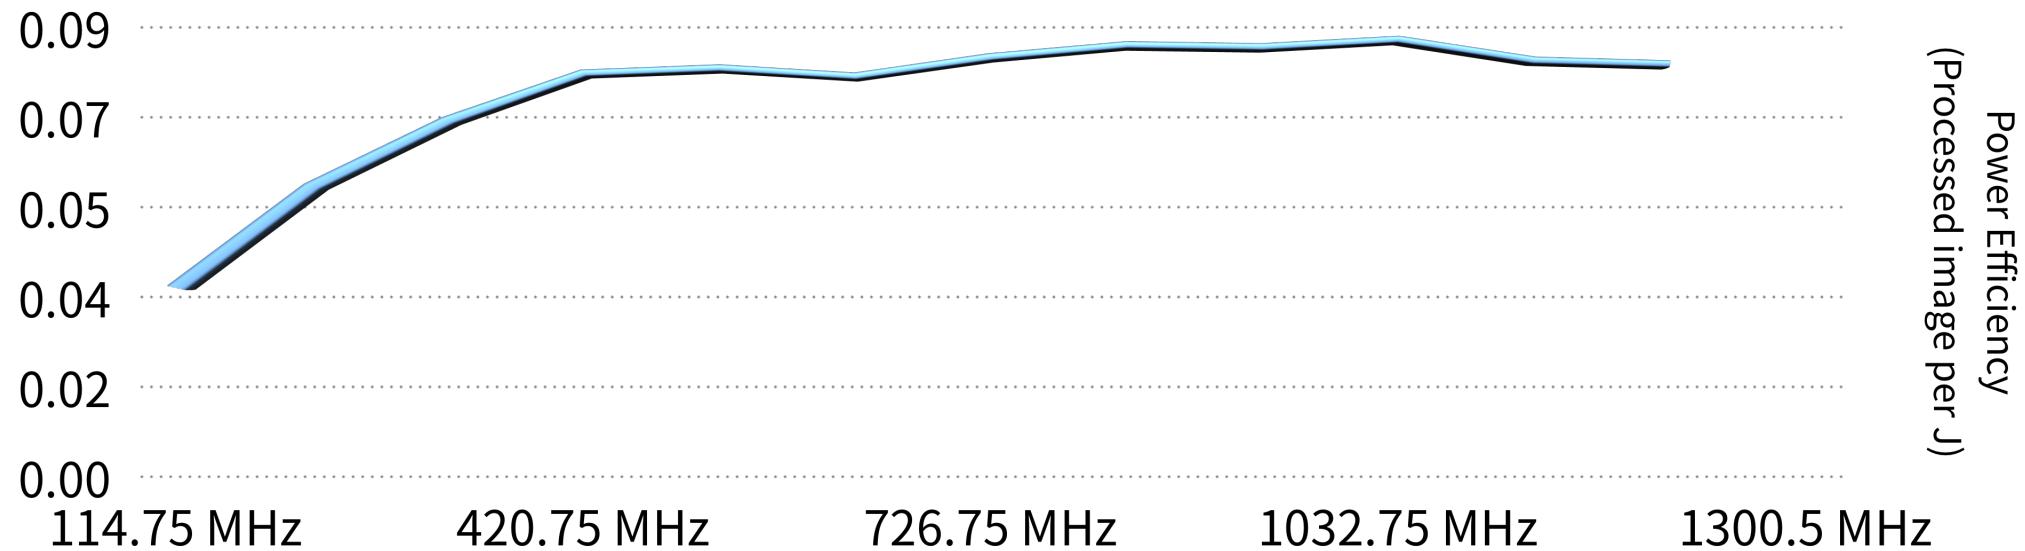

Performance of GPU according to the frequency of it

# Benchmark Results (TX2)

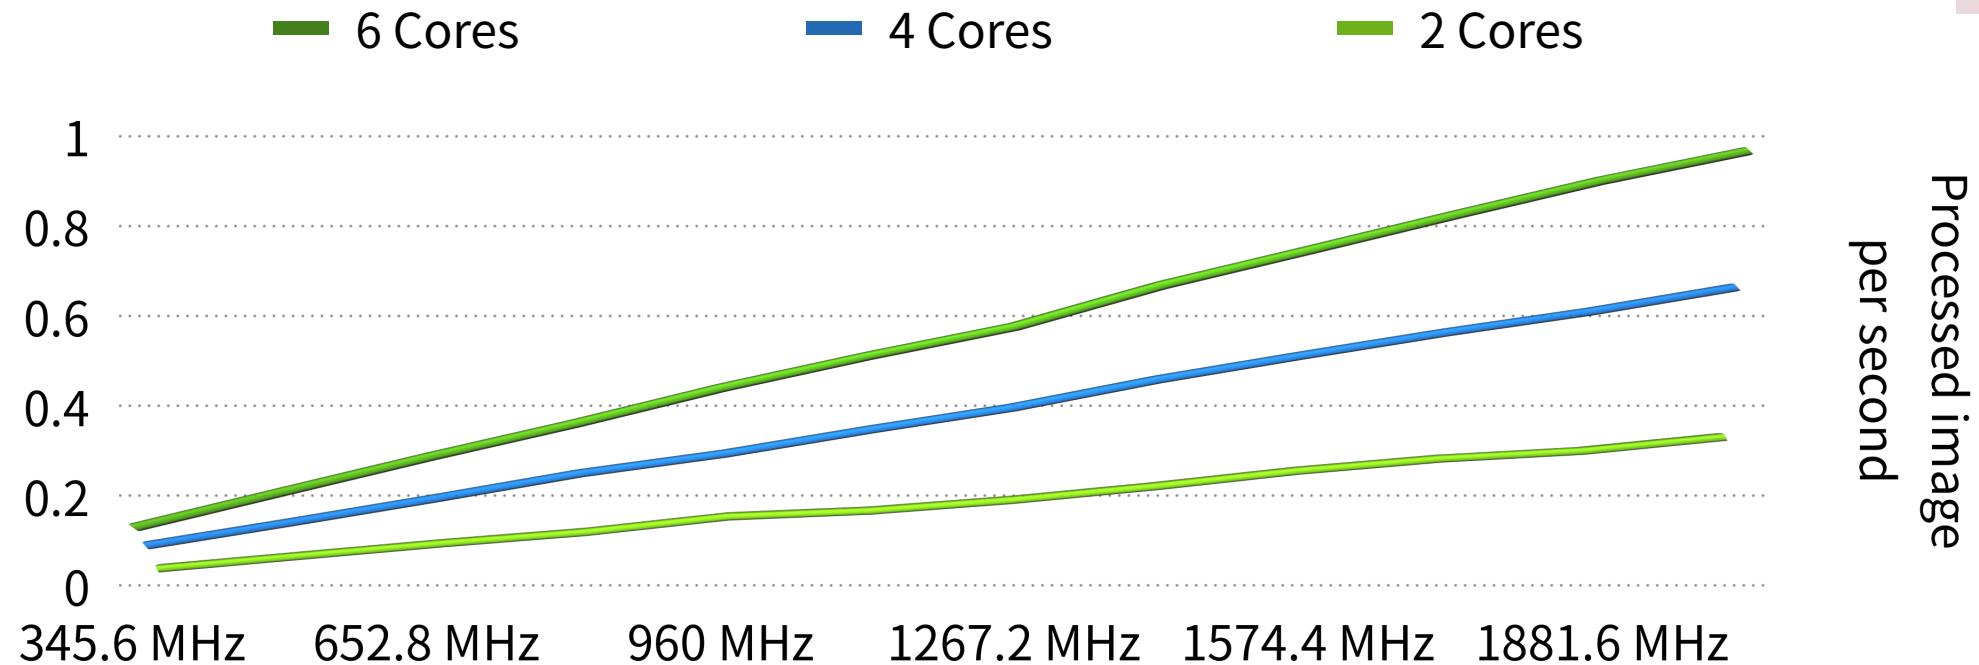

Power Consumption of GPU according to the frequency of it

# Benchmark Results (TX2)

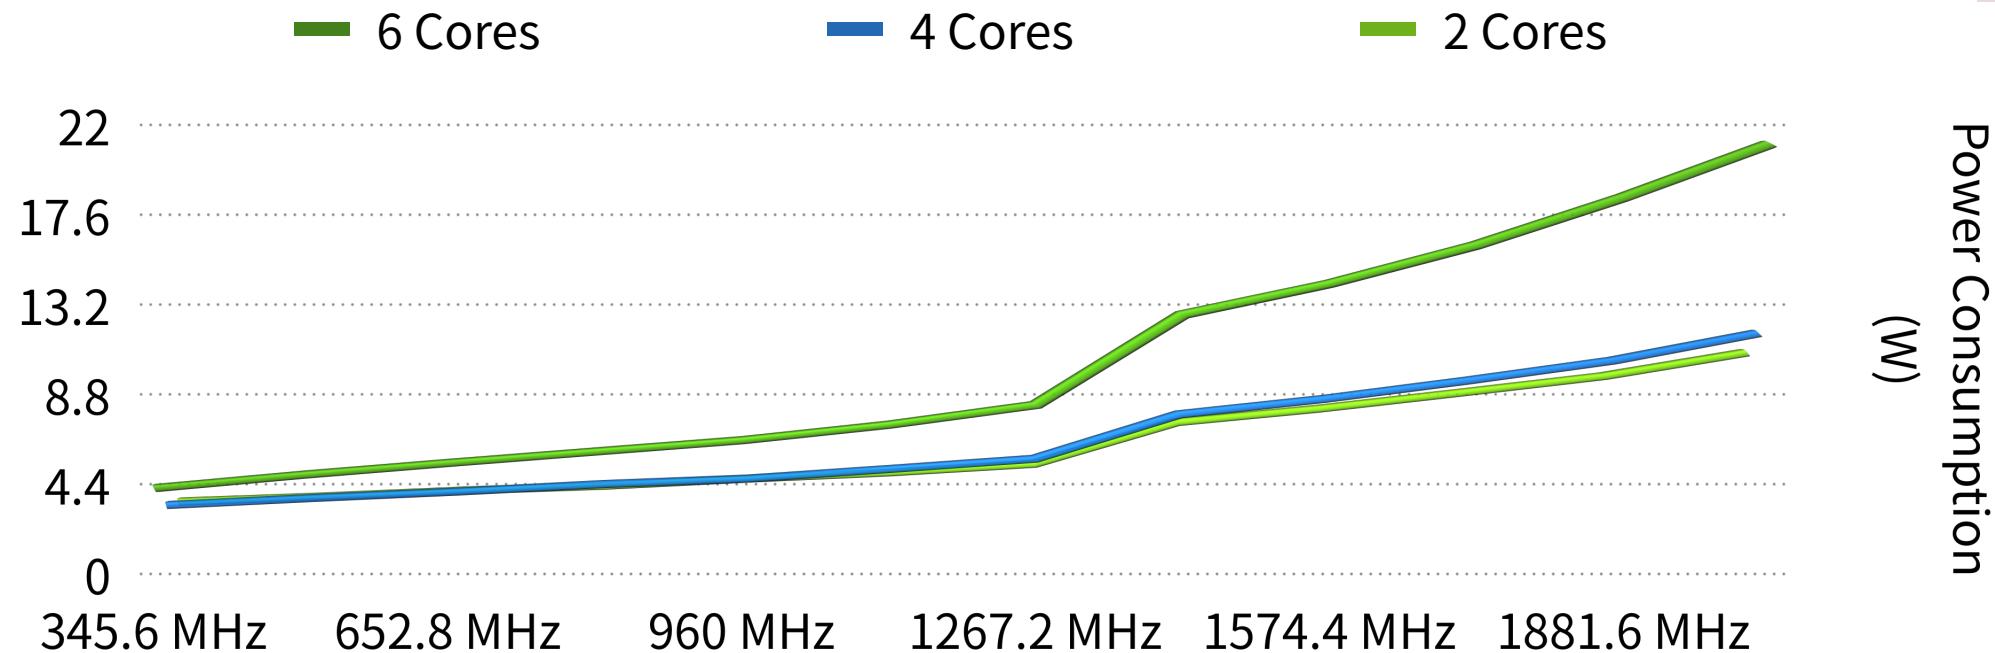

Power Efficiency of GPU according to the frequency of it

# Benchmark Results (TX2)

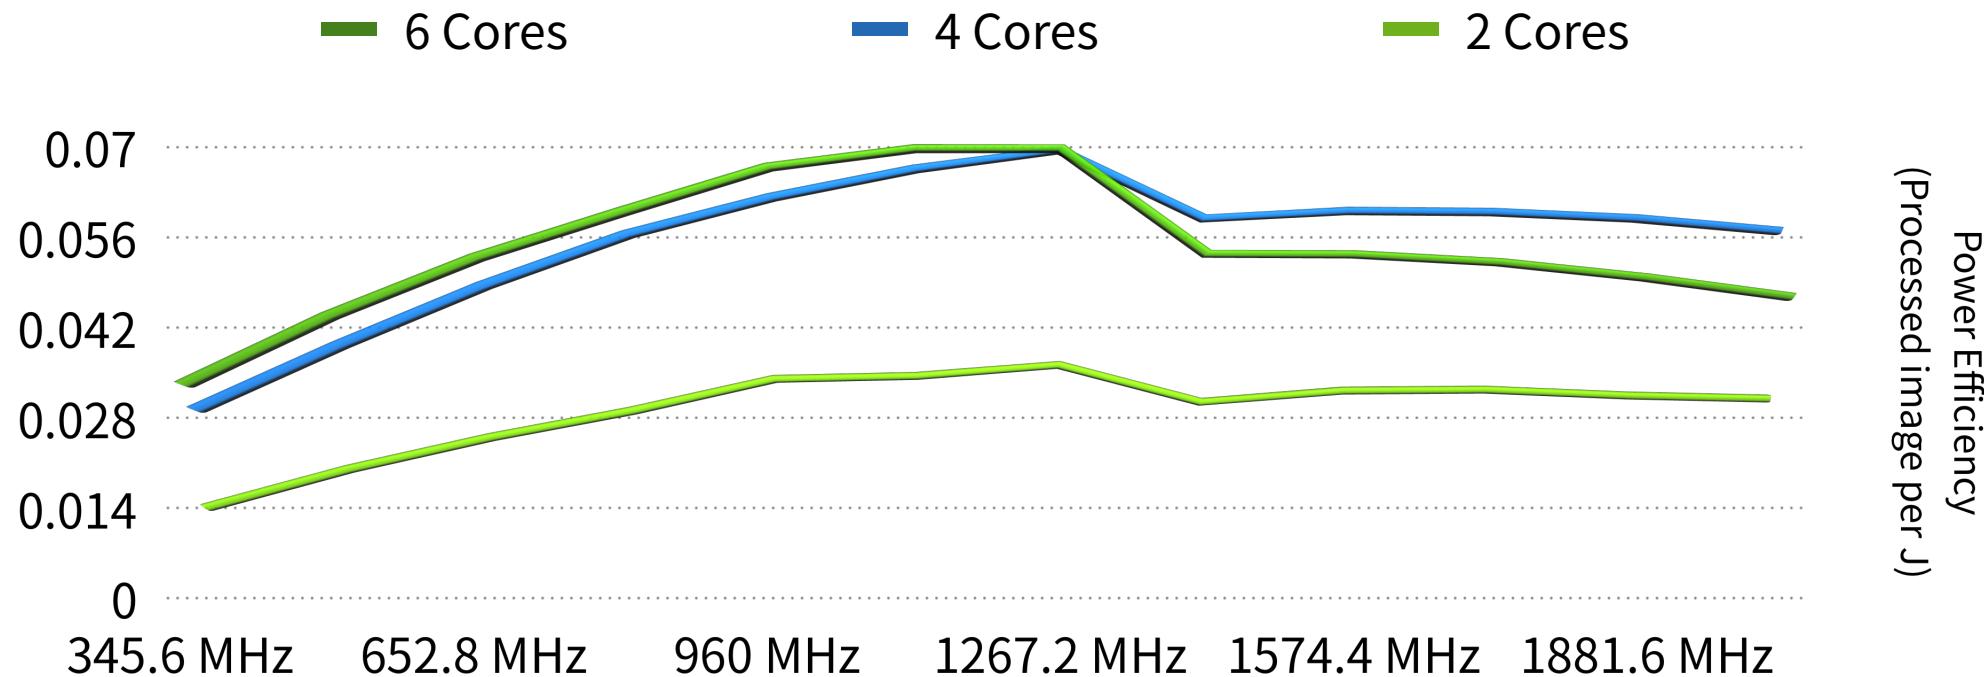

Performance of CPU according to the frequency of it

# Benchmark Results (TX2)

Power Consumption of CPU according to the frequency of it

# Benchmark Results (TX2)

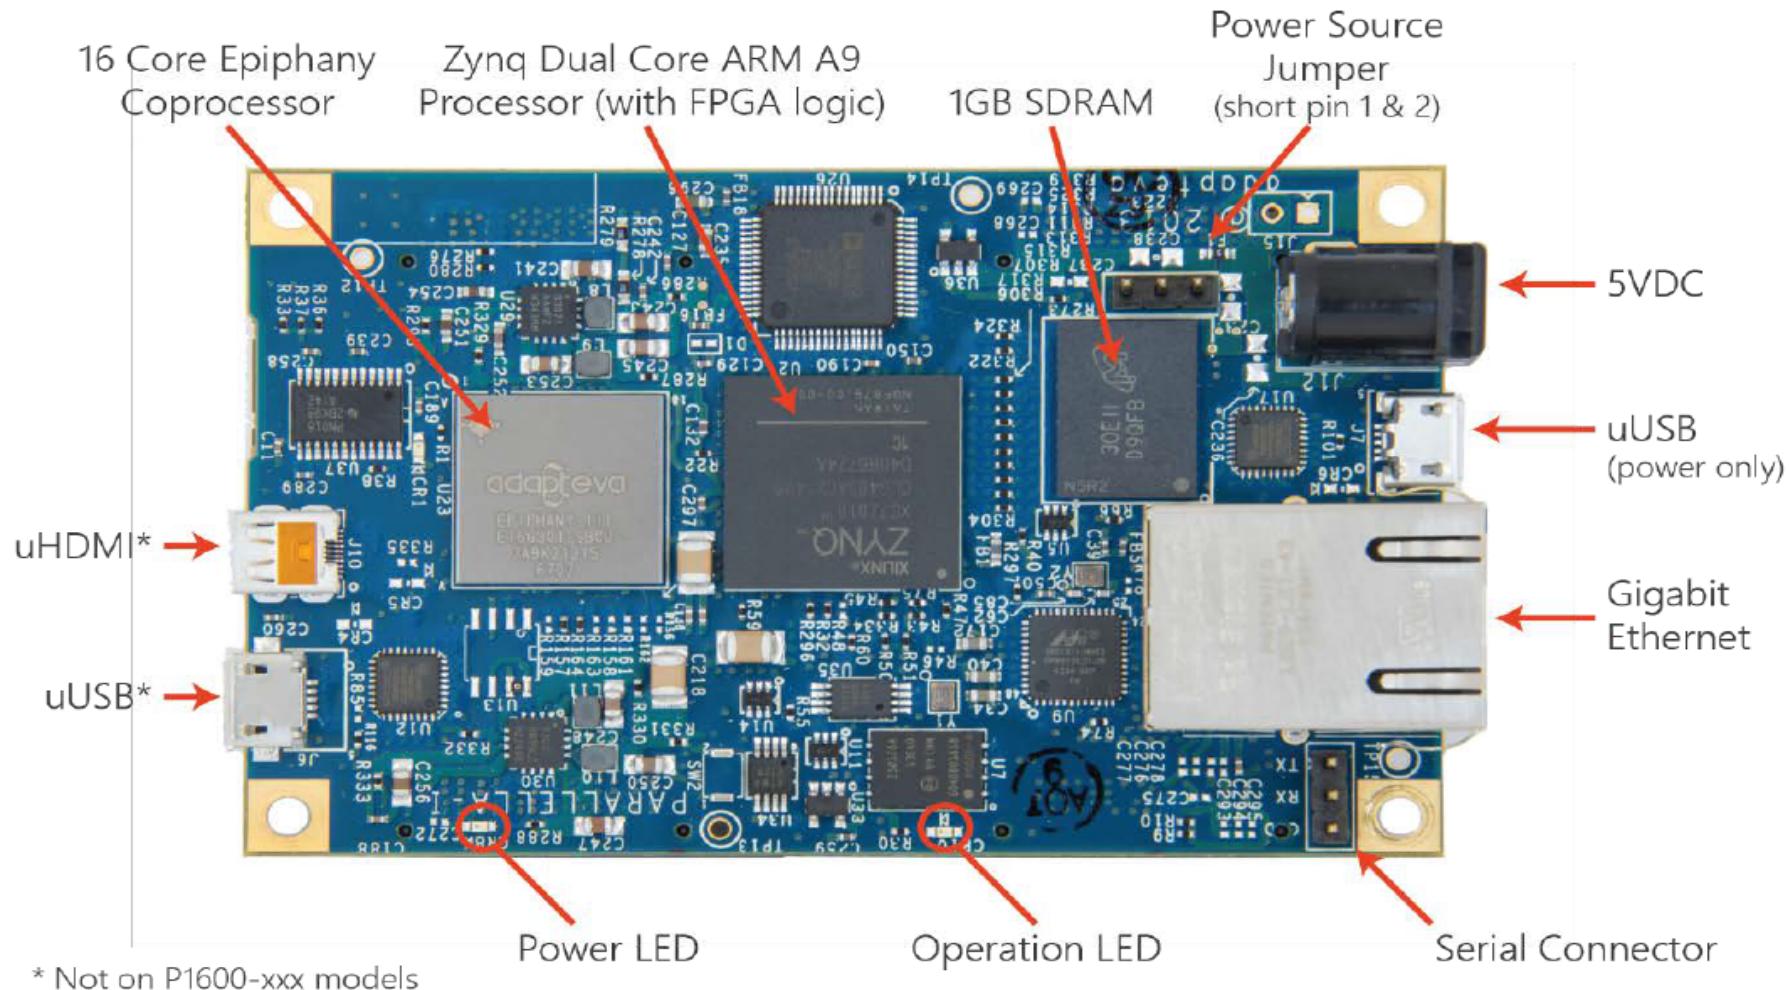

Power Efficiency of CPU according to the frequency of it

# Benchmark Results (TX2)

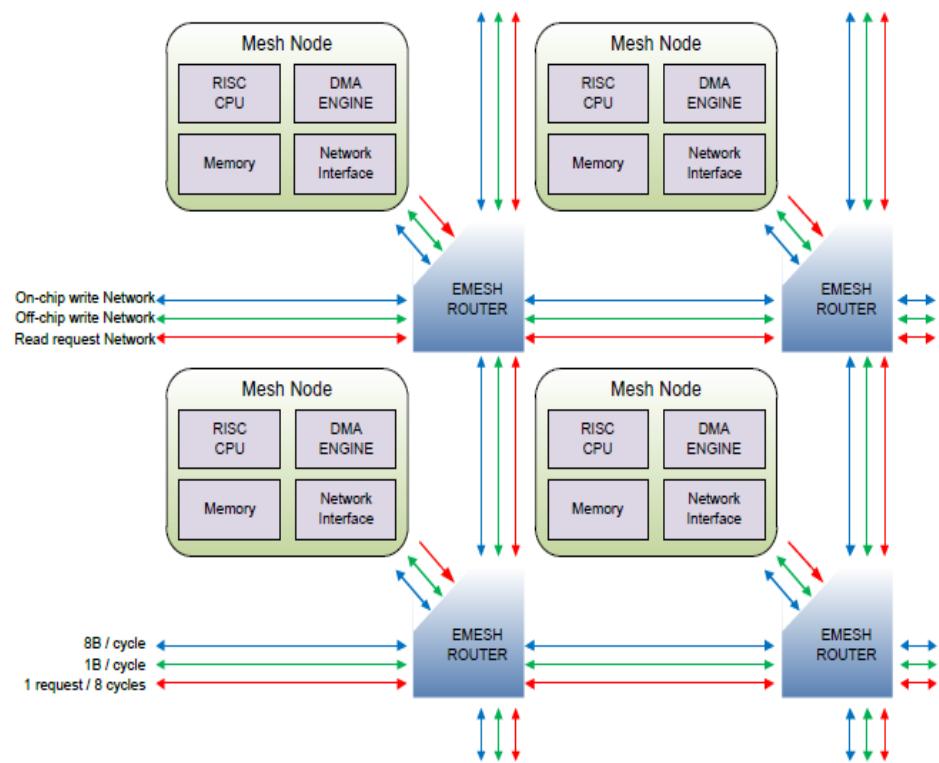

High Performance doesn't guarantee Power Efficiency.

Low Performance doesn't guarantee Power Efficiency too.

# Parallelia Board

# Epiphany Network-On-Chip (NOC)

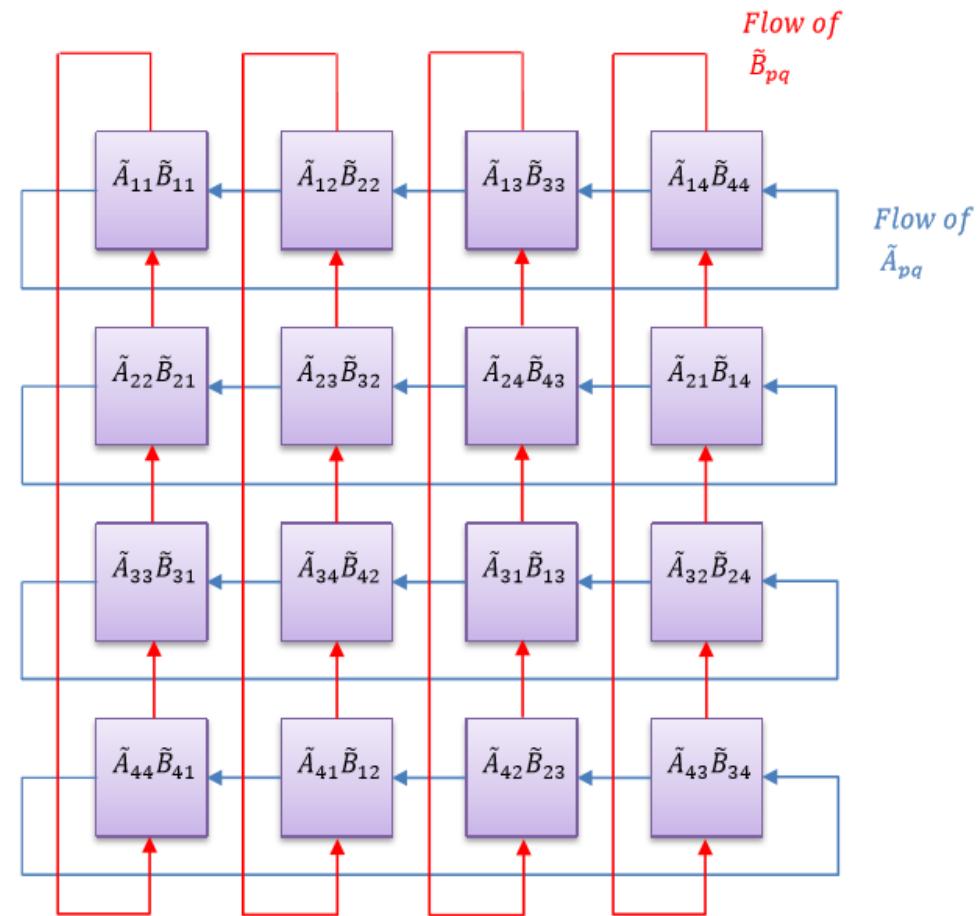

- GPU can only be used for data parallelism(No communication between cores).
- Epiphany cores have full-fledged CPUs that supports parallelism(Cores can communicate with each other as a workgroup)
- Epiphany IV draws about 2W for 100GFlops.  
While top end NVIDIA GPU draws about 50W.

# Matrix Multiplication

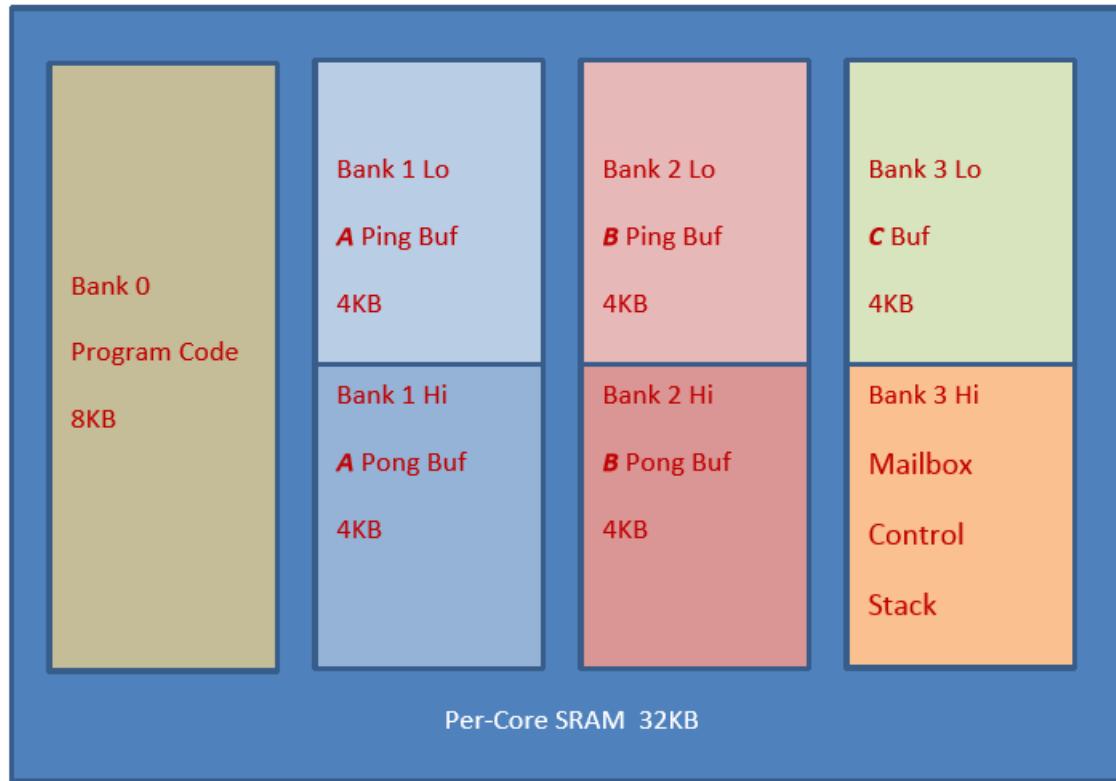

$$C = A \cdot B \rightarrow c_{ij} = \sum_{k=1}^N a_{ik} \cdot b_{kj}$$

$$A = \begin{pmatrix} \tilde{A}_{11} & \tilde{A}_{12} & \cdots & \tilde{A}_{1M} \\ \tilde{A}_{21} & \tilde{A}_{22} & \cdots & \tilde{A}_{2M} \\ \vdots & \vdots & \ddots & \vdots \\ \tilde{A}_{M1} & \tilde{A}_{M2} & \cdots & \tilde{A}_{MM} \end{pmatrix}$$

$$\tilde{C}_{pq} = \sum_{r=1}^M \tilde{A}_{pr} \cdot \tilde{B}_{rq}$$

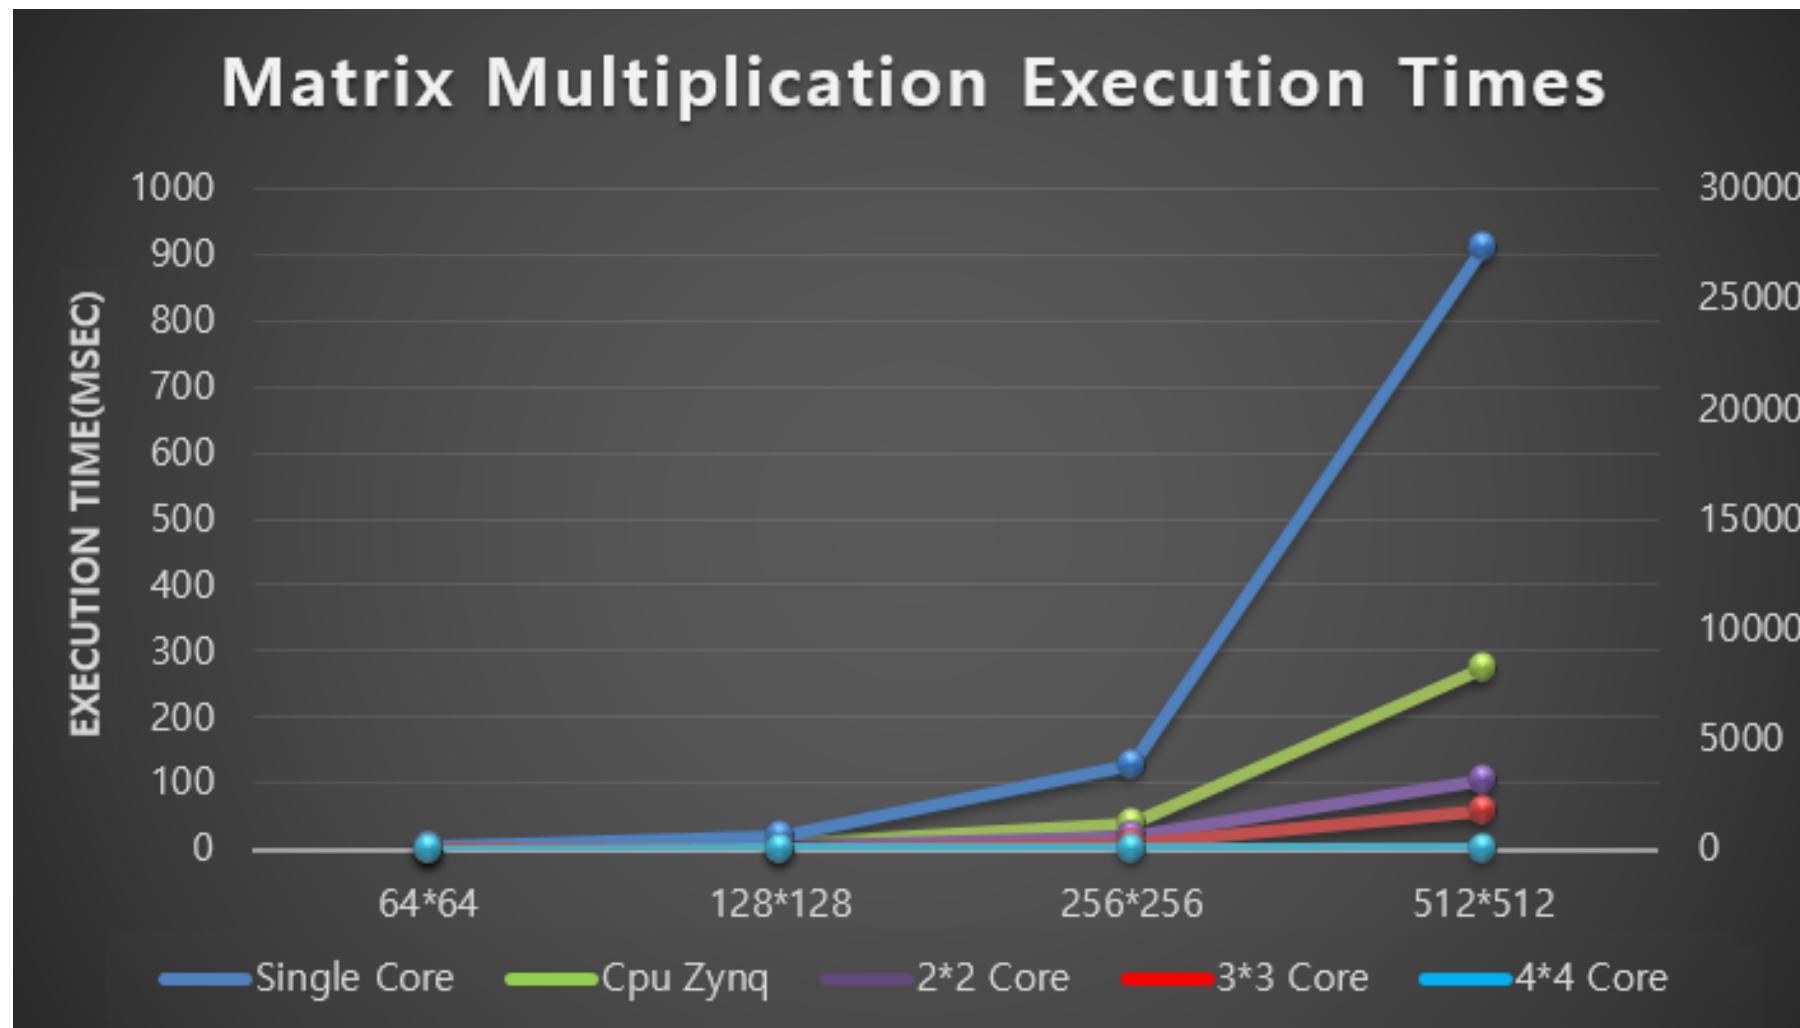

# E-core Local Memory Arrangement

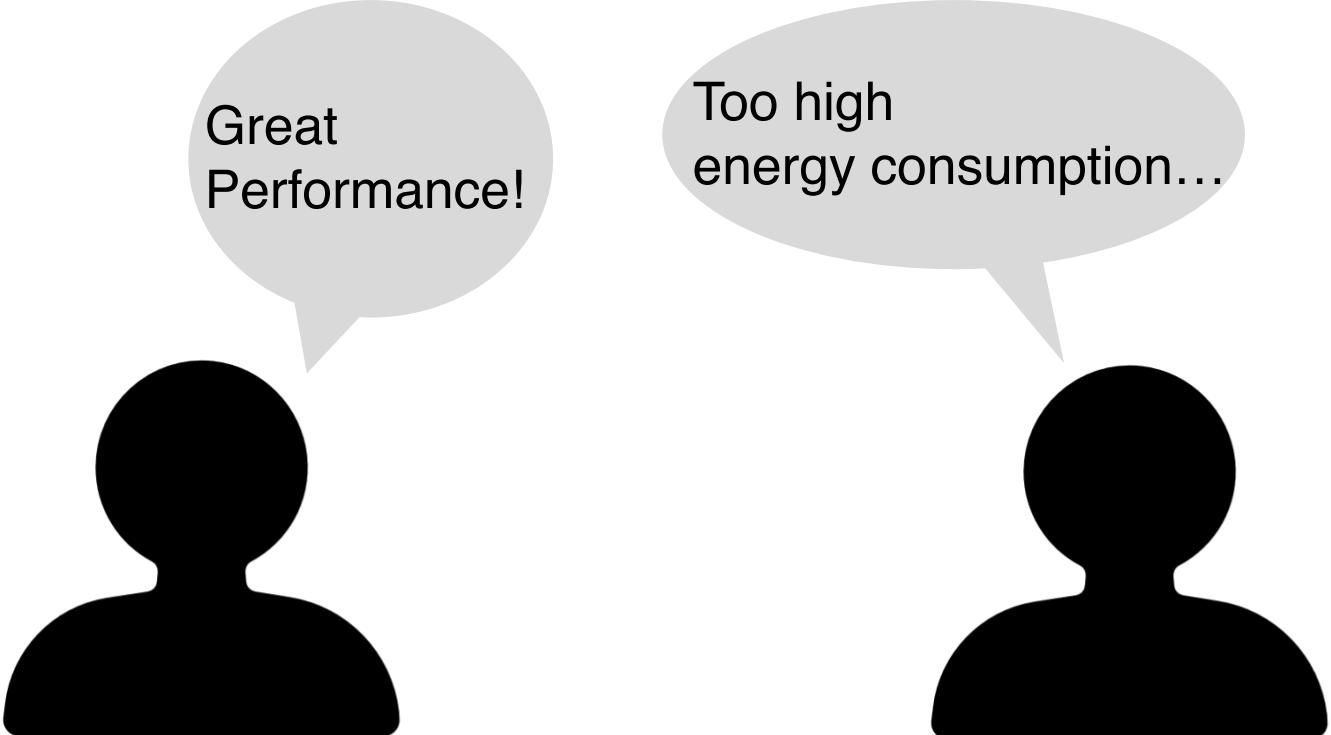

- 32KB of per-core SRAM has four 8KB banks
- First bank is for program code
- Second bank contains operand A sub-blocks
- Second bank contains operand B sub-blocks
- Higher half of the fourth bank contains per-core control structure, inter-core mailbox, program stack

# Matrix Multiplication Execution Times

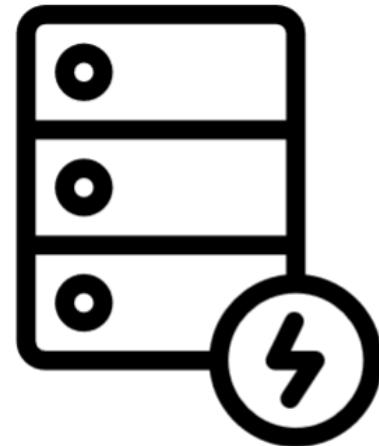

# Benchmarking Parallella

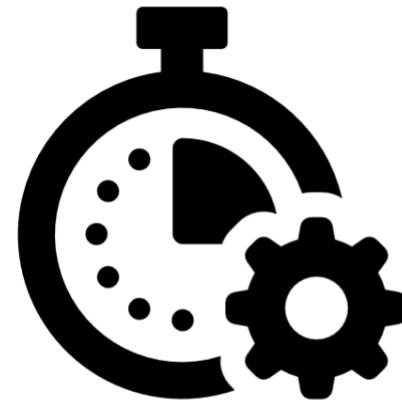

Great  
Performance!

Too high  
energy consumption...

# Benchmarking Parallella

**Power Consumption**

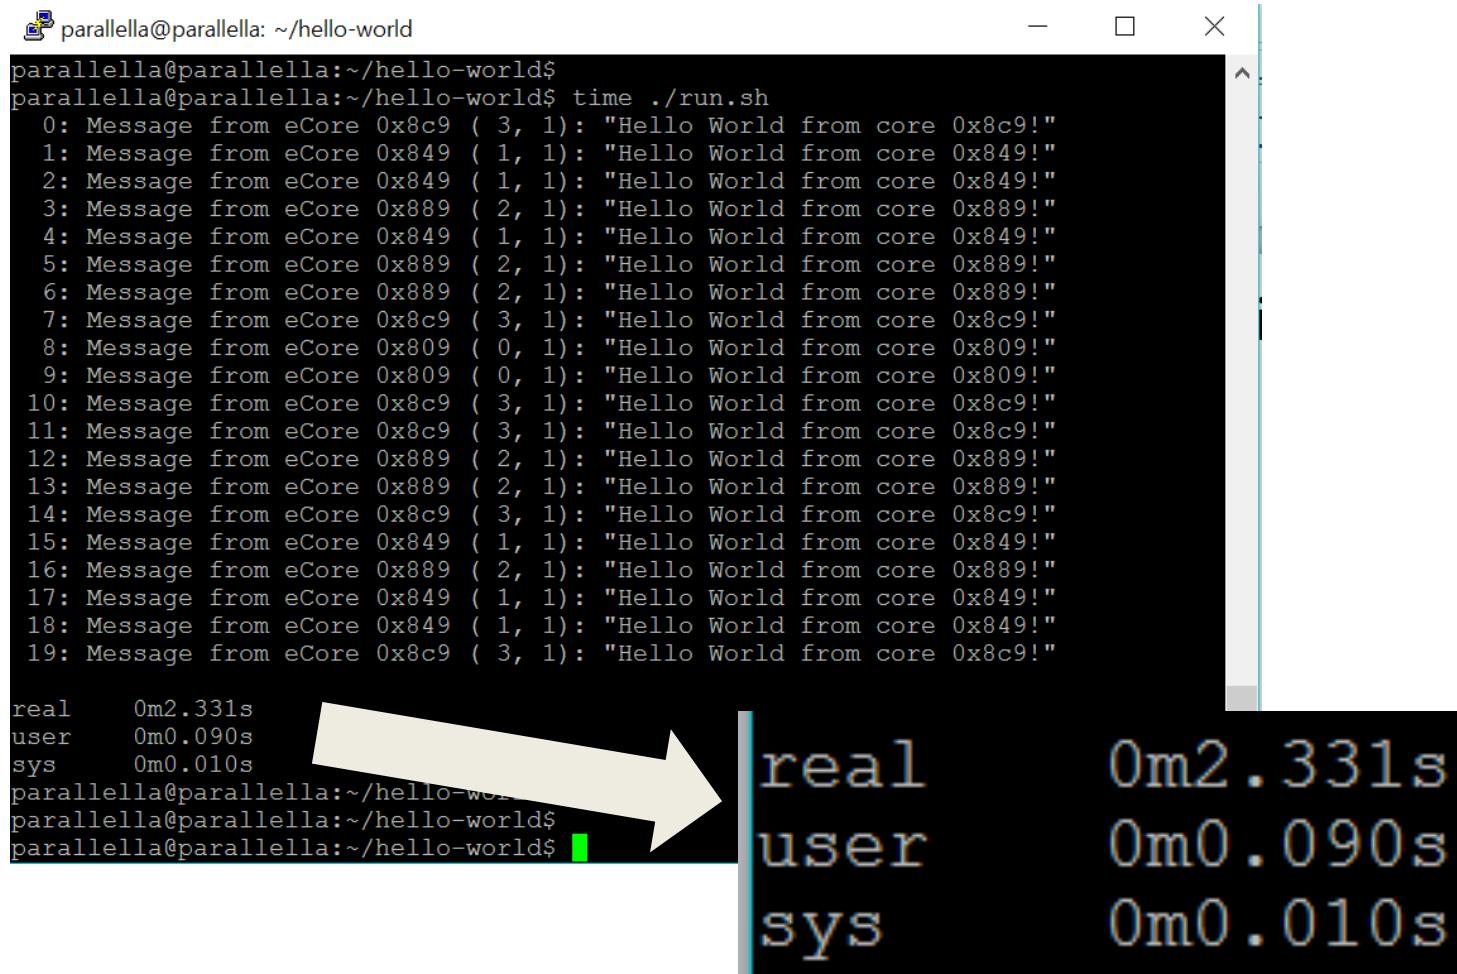

**Performance**

# Benchmarking Parallella

# How To Check Execution Time

## - Using “Time”

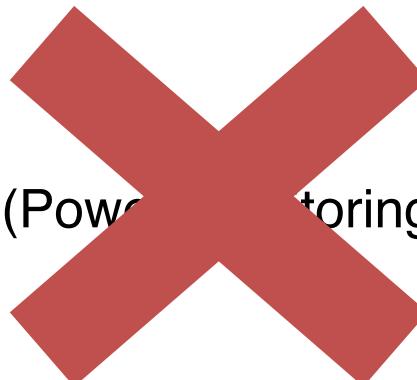

```
parallella@parallella:~/hello-world$ ./run.sh
0: Message from eCore 0x8c9 ( 3, 1): "Hello World from core 0x8c9!"
1: Message from eCore 0x849 ( 1, 1): "Hello World from core 0x849!"
2: Message from eCore 0x849 ( 1, 1): "Hello World from core 0x849!"
3: Message from eCore 0x889 ( 2, 1): "Hello World from core 0x889!"
4: Message from eCore 0x849 ( 1, 1): "Hello World from core 0x849!"
5: Message from eCore 0x889 ( 2, 1): "Hello World from core 0x889!"
6: Message from eCore 0x889 ( 2, 1): "Hello World from core 0x889!"
7: Message from eCore 0x8c9 ( 3, 1): "Hello World from core 0x8c9!"
8: Message from eCore 0x809 ( 0, 1): "Hello World from core 0x809!"
9: Message from eCore 0x809 ( 0, 1): "Hello World from core 0x809!"
10: Message from eCore 0x8c9 ( 3, 1): "Hello World from core 0x8c9!"
11: Message from eCore 0x8c9 ( 3, 1): "Hello World from core 0x8c9!"
12: Message from eCore 0x889 ( 2, 1): "Hello World from core 0x889!"
13: Message from eCore 0x889 ( 2, 1): "Hello World from core 0x889!"
14: Message from eCore 0x8c9 ( 3, 1): "Hello World from core 0x8c9!"
15: Message from eCore 0x849 ( 1, 1): "Hello World from core 0x849!"
16: Message from eCore 0x889 ( 2, 1): "Hello World from core 0x889!"
17: Message from eCore 0x849 ( 1, 1): "Hello World from core 0x849!"
18: Message from eCore 0x849 ( 1, 1): "Hello World from core 0x849!"
19: Message from eCore 0x8c9 ( 3, 1): "Hello World from core 0x8c9!"
